our present civilization
By Joseph V. Patterson
This book traces the rise of Britain from an agrarian society to a modern industrial nation, carrying with it the rest of the world. Although it reads much like a textbook, I cannot overemphasize the importance of its subject matter. I first read a borrowed copy of the first edition, and couldn't put it down. I then searched widely (including all over London) for another copy, finally finding the second edition on .com. Nowhere else have I seen such a comprehensive history of the origins of our industrial civilization, containing much that we should know as we proceed into the twenty-first century.

This celebrated and seminal text examines the industrial revolution, from its genesis in pre-industrial Britain, through its development and into maturity. A chapter-by-chapter analysis explores topics such as economic growth, agriculture, trade finance, labour and transport. First published in 1969, *The First Industrial Nation* is widely recognised as a classic text for students of the industrial revolution.

'Remains the finest textbook of British economic history between 1700 and 1914 available to sixth-form and undergraduate students.' - *Teaching History*
'It should be made available to every sixth-form pupil taking an Advanced level course in the subject.' - *Economics*
